EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

IN THE CLAIMS:

Claim 19 is canceled.

2. Claim 19 was non-elected as if without traverse in the amendment of April 28, 2005.

TERMINAL DISCLAIMER

3. The terminal disclaimer filed on March 13, 2006 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Patent No. 6, 743,468 has been reviewed and is accepted. The terminal disclaimer has been recorded.

REASONS FOR ALLOWANCE

4. The following is an examiner's statement of reasons for allowance: the closest prior art, to Bird (US 4938991) and Browning (US 4416421), in combination, suggest providing first and second populations of particles, where both populations of particles

would be injected into a supersonic nozzle system at the same time, where the temperature of the gas in the nozzle is such that the first population is not heated to its melting point and the second population of particles is heated to its melting point and on the substrate is formed a combined coating from the first and second populations of particles (see paragraph 9 of the Office Action of June 13, 2005). However, Bird teaches that the non-melted material (carbides) are fused to the surface of the base material through the melted matrix material 20 (see column 4, lines 25-40) and neither of the references, alone or in combination, teaches or suggests the requirement of independent claim 1 that the non-melted particles adhere to the substrate by "direct bonding of the first population of particles onto a substrate positioned opposite the nozzle", thus requiring that the first population of particles adhere directly to the substrate, not through being held by the matrix of the melted second population of particles.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
